

***TherAssist* Integrates FOTO QCDR to Offer Automated MIPS Reporting to Physical Therapists & Occupational Therapists**

(Highland Park, IL, 2/1/19) – *TherAssist* is pleased to announce its partnership with Focus on Therapeutic Outcomes, Inc. (FOTO®), the leading outcomes management solution in rehab therapy, to provide their clients a streamlined and cost-effective MIPS (Merit-based Incentive Payment System) reporting solution for the 2019 performance period.

Via integration with the FOTO QCDR (Qualified Clinical Data Registry), *TherAssist* clients who are eligible to report as individual clinicians or groups, as defined by CMS (Centers for Medicare and Medicaid Services), for 2019 will be able to efficiently gather, monitor, and submit quality outcome measures, quality process measures, and improvement activities data throughout the year. This benefit is extended to those clinicians who are required to participate in MIPS for 2019 and to clinicians or groups who wish to participate under CMS' Opt-in or Voluntary Participation options.

As a CMS-endorsed registry since 2009, FOTO has the most experience serving the quality reporting needs of physical therapists (PTs) and occupational therapists (OTs). Known for their outcomes management solutions, risk-adjusted functional assessments, and predictive analytics, FOTO has optimized work around patient-reported outcomes since 1994 and currently has a database of more than 23 million patient assessments.

Jesse Rijos (Director of Operations, TherAssist) explains why they chose the FOTO QCDR for integration, from the industry's many options, "The wide selection of quality measures offered for reporting (19) is compelling and the array of choices will absolutely benefit our clients. It will give them the freedom to pick and choose—to report only on measures most relevant to their patient population. FOTO's long-standing reputation for excellent solutions and customer support was also an influencing factor. It's clear this QCDR is designed to alleviate added clinical documentation burden for ***TherAssist*** and FOTO users, while driving MIPS compliance. Dashboard monitoring will catch errors in advance, allowing clinicians to tweak workflows or data capture as needed to feel fully confident when it's time to report."
